The new VS ENVI® waste separation system components

VS ENVI®: For more hygiene and sustainability!

Birmingham, March 3, 2024. **For a long time, kitchens have not only been about cooking and eating. Kitchens have become an urban space for living. Themes like hygienic and environmentally friendly waste disposal also play important roles today. This is why Vauth-Sagel have developed system solutions that cover exactly these themes and at the same time, enable flexible waste separation. With the largest portfolio of integrated solutions in the market, VS ENVI® offers the right solutions for all household sizes. International units of measurement, for the British and American markets, for example, are also taken into account.**

VS ENVI® Water is completely new in the portfolio and the systems VS ENVI® Flex and VS ENVI® Free have been upgraded. The bins of all VS ENVI® system are now manufactured from 100% recycled materials and are also completely recyclable themselves. Vauth-Sagel has the necessary expertise at the location in Paderborn, Germany, where the company is specialised in injection moulded plastics and also produces for industries with high standards such as medical technology and components for automotive suppliers. The latest optimisations of VS ENVI® Flex and VS ENVI® Free offer even more flexibility and options for adaptation than the previous versions. VS ENVI® Water is a perfect match for the spirit of the time, whose core themes of sustainability and water consumption.

VS ENVI® Water – Waste collection system and water storage together!

Water treatment systems are a trend today. The Quooker in particular has taken on a pioneering role. But kitchens offer limited space. Many wonder where they can put their waste collection system, which is typically located beneath the sink. Vauth-Sagel has now developed the ideal solution. VS ENVI® Water is the perfect supplement to the Quooker or other water treatment systems with identical dimensions.

Thanks to VS ENVI® Water, waste collection systems and water storage tanks can now be installed together. In a 600, 800 and even 1000-millimetre-wide cupboard body, the combined solution requires a unit depth of 470 millimetres in order to organise the entire hose and cable management so that it is compact and tidy. A Quooker Cube cold water and a Pro3 boiling water storage tank can be set up to the right or left of a 22-litre waste container or two 10-litre containers. The water tank remains safely in its place when the waste container is pulled out with the unit front. Depending on the cabinet width, the 3-litre Quooker water reservoir can be combined with a 400, 600 or 800-millimetre-wide VS ENVI® Space system. A brand new addition is the 7-litre water

MEDIA INFORMATION

tank, which requires an additional 30 millimetres of cabinet space. For this purpose, a width-reducing has been developed for a 600-millimetre-wide cabinet variant. The new system is available for order already.

VS ENVI® Water is fast and easy to install, and flexibly adapts to the given installation circumstances. Extension hoses can be optionally used to set up and connect the Quooker system in front of the unit.

VS ENVI® Water is attached to the side wall and underbody such that it is stable and safe. Like all VS ENVI® space systems, this variant has a metal cover plate and is equipped with smooth, durable sliding technology. With VS ENVI® Water, Vauth-Sagel offers a clever solution for more room in sink base units.

VS ENVI® Free and VS ENVI® Flex – 2 upgrades to the next level!

Both systems are based on waste solutions that are already available in the Vauth-Sagel portfolio for existing drawer runners. This means that the systems can be integrated into all commercial drawer runners. And the existing seams can be retained.

The new feature of VS ENVI® Free is the bin holder VS ENVI® Free Tray, which makes it more convenient to use the VS ENVI® bin inside a drawer. The bin holder is simply inserted into the existing runners and the bin is placed in the slot provided. With the holder, the bins stay in place even during jerky opening and closing of the drawer. The drawer itself remains clean, and the removable shell is easy to clean. An additional slot can be used to store bin bags or cleaning materials. Each bin can also be equipped with a lid, and a bio lid is also available for the 6L bin.

In the upgraded version of the proven VS ENVI® Flex system, significantly fewer parts are installed. The impressive result: overall, VS ENVI® Flex is even more economical, environmentally friendly and lighter than the previous version. With the production optimisation, the trade benefit from a wider variant selection, larger bin volumes and a more attractive end customer price.

VAUTH-SAGEL:

Contemporary, innovative storage solutions. This has been the core business of Vauth-Sagel for over 60 years. When it comes to all of its system components, the owner-operated family company focuses on people's desire for as much convenience as possible. The development, production and sales divisions are guided by this desire – every day. The company transferred its core expertise in the kitchen and furniture industry to modern living components long ago. And this motivates its 1,000 employees to manufacture over 85 million products with the "Made in Germany" quality hallmark every year. Alongside many years of expertise in a wide range of materials, other
